It is practical and it is an excellent example how a course in career development should be designed at a undergraduate level. Readers and users must have in mind that the authors follow their CIP theory and the book must be used along with a number of separate career interventions, individual career consultations, and career counselling instruments, some of which should be accessed and bought separately. It is not suitable for training of Career Counsellors, but could be good example for such graduates how they should design systematic approach combining individual and group consultations. I find it very practical and provides me with some ideas for my Career

Development course.3 of 3 people found the following review helpful. Very little information for informed peopleBy CHRIS WALKER I purchased this book as required for a masters leadership class. While required, this book is informative at a high school level at best. Full of generalizations and not broad spectrum for use in many occupational fields, this book is not for anyone who has any experience or previous knowledge of career development. If not required to have it I would have returned it after the first chapter.0 of 0 people found the following review helpful. This comprehensive career text combines an innovative theory-based approach with practical knowledge developed during the authors' combined 100 years of providing career services to college students. Part One (chapters 1-5) focuses on cognitive information processing theory with detailed, practical examples of the application of the theory in typical career situations, including self-knowledge, occupational knowledge, and decision making. Part Two (chapters 6-10) provides a multidisciplinary overlay of issues that affect career decisions, such as economic trends, the global economy, organizational culture, and family-work issues. Part Three (chapters 11-15) focuses on concrete steps for executing a strategic career plan and seeking employment, including an examination of familiar topics such as interviewing, resume writing, negotiating, and work adjustment, from a cognitive and multidisciplinary perspective. Revisions to 3rd edition: \*New information about occupational classifications \*Labor market projections extended to 2016 \*More active learning strategies incorporated into instructor's manual and also embedded in the text \*Clearer directions for completing assignments provided in appendices, e.g., career field analysis research paper. \*Redesigned 350+ PowerPoint slides based text and instructor's manual contents.
